

1. Job Orders (General Workflow)

For New Customers

When dealing with new customers, the team needs to gather the following:

- **Brand** of the device/equipment.
- **Location** of the brand or unit.
- **How the unit is installed/positioned.**

The **Service Manager** is responsible for **re-confirming** details if ever the customer returns for additional work.

B2C vs B2B

- **B2C (Business to Customer)**
The service manager handles the customer directly.
- **B2B (Business to Business)**
There are specific roles involved such as:
 - Contractor contact person
 - Accounting representative
 - Manager (usually the one handling payments)

Billing & Documents

- Billing, receipts, and admin documents can be accessed by:
Admin and **Service Manager**
- Both should have full access to avoid conflicts whenever one person is unavailable.

Forms

- Forms are sent by the admin when the work is not yet completed or missing compliance.

- Templates for forms are already prepared ahead of time.
 - The **branch manager does NOT print** forms — only the assigned admin.
-

2. Scheduling

Customer Scheduling

Customers may request specific schedules, especially **rush jobs**.

Who Controls Scheduling

- The **Service Manager (SM)** makes the final decision on:
 - Scheduling
 - Rescheduling
 - Adjustments for conflict
- **Admin** wants visibility into the schedule so they can:
 - Assign reminders
 - Check preventive/corrective maintenance timelines
 - Spot conflicts

B2B Site Visits

The service manager **personally visits businesses** for B2B cases.

Contractors in B2B setups tend to be **stricter with scheduling**, so timelines must be followed more carefully.

3. Service & Inventory

Inventory Awareness

- The Service Manager should always know what inventory items are used during service.

Suggested System Feature

Connect **inventory items to expenses**, so anytime a part or material is used, it reflects:

- Inventory stock
- Expense tracking

Customer-Paid Consumables

Customers often pay for consumables used by the service manager (example: freon).

Question answered:

Yes, consumables paid by customers should be included in the **service manager's expense form**, but marked as **customer-funded items** to avoid confusion.

Accounting

This ties into:

- Accounts Payable
- Accounts Receivable

The full B2B process form (from contractor to company) will be provided later by the admin.

End-of-Day Documentation

- Usually handled by **Admin**
- But the **Service Manager** may also submit documentation when needed.

4. Payments

Modes of Payment

- **B2C:** Cash, cards, GCash, bank transfers
- **B2B:** Mostly bank transfers or pay-through systems, cheques (rare)

Statement of Accounts

There should be a **template** that includes:

- Where payments were sent
- Payment details and reference numbers

The admin will share the Excel template later.

Fixed Rates

Fixed rates need to be sent by the admin so programmers can:

- Encode them into the system
- Speed up job order creation
- Reduce manual errors

Device Compatibility

Service team uses tablets or laptops.

The system should be:

- **Responsive across devices**
- **Stable** (bugs should be minimized as much as possible, haha)

Receipts

- **B2C:** Receipts are optional
- **B2B:** Receipts are required for transparency to the business

They currently pay for **MS Drive Storage**, but it's unclear how to integrate storage sync into the new system.

Calendar Feature

Calendar should have:

- A **checklist** marking whether admin has received the required payments or documents.
-

5. Reports

Current Issue

- They don't store customer history locally.
- No local files on their end.

Needed Features

- A full **service history tracking** system:
 - Past job orders
 - Customer records
 - Contractor interactions
 - B2B logs

Access

The program should be accessible on-the-go, especially for the **Service Manager**, even outside the office.

Clean Summary by Role

Service Manager (SM)

- Handles customer confirmation (B2C and B2B)
- Approves or changes schedules
- Uses/records inventory items during service
- Visits B2B clients
- Submits end-of-day reports (if needed)
- Views all job orders and documents

Admin

- Manages billing, receipts, and documentation
- Sends forms and prints documents
- Sets reminders for schedules
- Monitors preventive/corrective maintenance schedules
- Creates Statements of Accounts
- Has full access to job orders and documents
- Handles B2C payment reports

Contractor / B2B Contact

- Strict with scheduling
- Sends complete forms and requirements
- Coordinates with accounting and managers
